

Rivestop

Say goodbye to after-sales claims
Effective, very fast and permanent sealing

Rivestop

WHAT IS IT?

RiveStop is a watertight sealing system designed to waterproof through-wall voids in concrete walls, generated after the removal of the formwork system.

WHAT DOES IT DO?

RiveStop, applied with a riveting machine, expands mechanically, providing an **effective** and **permanent** seal in seconds.

Watertight under pressure

Durability

Aging test

Hermetic against radon gas

Acoustic resistance

Fire resistance

INSTALLATION PROCESS

Rivestop is delivered ready for installation in a very quick and easy way

ELECTRIC RIVETING MACHINE *
Approximately 420 holes / 1h

VIDEO

1. Insert Rivestop into riveting machine
2. Insert into the hole to be sealed
3. Rivet up to the rivet shank cutout.

ADVANTAGES

WATERTIGHT MECHANICAL SYSTEM

100% sealed, withstanding more than 8 bars of pressure.

PERMANENT AND DEFINITIVE

QUICK AND EASY TO APPLY

Up to 420 holes sealed per hour.

NO MARGIN OF ERROR

The human factor does not play a role.

SUITABLE FOR ADVERSE WATHER CONDITIONS

In any weather situation, high and low temperatures, heavy rain, ...

DOES NOT REQUIRE ANY ADDITIONAL FINISHING

Suitable for "exposed face" walls.

VERSATILE AND ADAPTABLE

For both conical and cylindrical bores.

SIMPLE AND CLEAN

EASY TO SUPERVISE

At a glance we verify its correct application.

VARIED AND CUSTOMIZABLE

*The riveting tests have been carried out with a riveting machine with a torque of 13kN and a stroke length of 25 mm.
